

Our wireless sensors can be placed almost anywhere! Take a look at where sensors can be used in your neighbourhood.

Where's the coolest spot in the hawker center?

Heat sensors placed in hawker centers can help to identify which stalls are producing the most heat.

Which is the emptiest cabin on the next train?

Making use of the sensors in smartphones helps us find out about crowds and human traffic.

Is my favourite parking spot occupied?

Wireless monitoring is perfect for outdoor carparks that do not have much infrastructure.

**Sense & Sense-abilities** is a research group that helps answer questions about your environment. Here's how we do it.

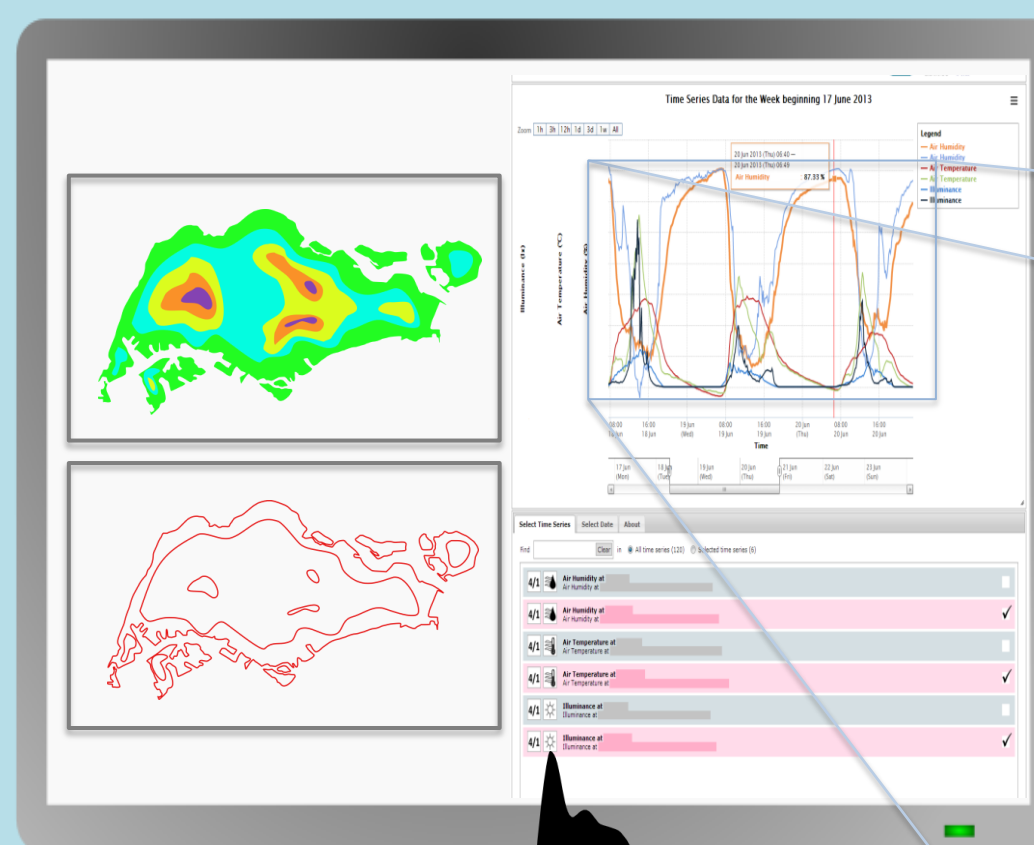

# sense & sense abilities

We send this information wirelessly from anywhere in Singapore to our computers

2

Our sensors can sense: Humidity, temperature, noise, and even particles in the air

1

We analyze the data in order to make smarter decisions
